CONTENTS

1 WHAT FOR
2 HOW?

- Basically the idea behind Rider is to provide an alternative way for students to get a helping hand through their college students.

- In this if someone(student) does not get public transport to reach their college then he can send request to those students who are coming through their own vehicles by the same route by using rider.

- By using Rider students can do a part-time also.

- They can charge the applicable amount by dropping the students on their destination.

- Users can browse through a list of upcoming rides in their area , filter by location , date and distance.
